

# Immunome Raises \$12.2 Million in Additional Series A Financing

**Funding allows further development of novel, outcome-based cancer immunotherapy discovery engine**

October 6, 2016, Philadelphia, PA – Immunome, Inc., a biotechnology company focused on developing transformative immunotherapies to treat cancer, today announced it has closed on an aggregate of \$10.2 million in 2016 Series A Preferred Stock investments. An additional \$2 million is committed to be funded by June 30, 2017. The Company plans to use the proceeds to further develop and scale up Immunome’s discovery engine and pipeline of cancer therapeutics.

“We thank all of our investors for their confidence and enthusiastic support of the development and scale up of our technology and novel cancer immunotherapy candidates,” said Jane H. Hollingsworth, Immunome’s chief executive officer.

“We believe that this support has enhanced our ability to maximize the value of our unique immunotherapy approach.”

Michael J. Morin, PhD, Immunome’s president and chief scientific officer commented, "This funding allows us to continue to aggressively optimize and implement our unique outcome-based discovery engine. We begin the process with patients who have cancer-educated immune systems, particularly those who have had a robust response to a checkpoint inhibitor. Our platform then generates large libraries of hybridomas, utilizes high-content screening approaches and identifies targets of the most important antibodies, before finally engineering drug-like qualities into the therapeutic candidates."

## **About Immunome**

Immunome is a biotechnology company with a unique and powerful outcome-based immunotherapy discovery engine. Originally developed at Massachusetts

Institute of Technology's Whitehead Institute, Immunome's platform leverages the patient immunological response to circumvent the weaknesses, complications and inefficiencies of traditional discovery research. Immunome focuses on the simultaneous discovery of novel antigens expressed in patient tumor cells and the cognate native patient antibodies that target those antigens. These antigen-antibody pairs form the basis of the Immunome library and therapeutic pipeline. For more information about the company, visit <http://immunome.com>.
