

Senzo and Abingdon Health Enter Into Strategic Partnership

PRESS RELEASE • MAR 20, 2023

Abingdon Health's CDMO service to support Senzo in leveraging its innovative, high-accuracy Amplified Lateral Flow (ALF) point-of-care diagnostics platform technology across multiple product opportunities.

PHILADELPHIA, March 20, 2023

(Newswire.com) - Senzo Health Limited (London, UK) ("Senzo") and Abingdon Health PLC (York, UK) ("Abingdon Health") are pleased to announce the signing of a strategic partnership agreement.

Under the terms of the partnership, Abingdon Health will support Senzo by providing contract development and manufacturing ("CDMO") services to Senzo and its partners to enable them to develop and manufacture new rapid tests utilizing Senzo's cutting-edge ALF platform.

Senzo is a leading innovator in the rapid diagnostics testing market, with its revolutionary lateral flow technology delivering the same accuracy as laboratory-based PCR with results available within 10 minutes, at a fraction of the cost. Senzo Health's technology is initially being applied to the development of a Covid-19 antigen assay, a broader respiratory panel, and other infectious disease tests.

However, there is a wide range of applications across clinical, animal health, food, plant pathogen and environmental testing that would benefit from the strengths of Senzo's platform technology. This strategic partnership will allow Senzo's partners to accelerate product development through access to Abingdon Health's CDMO services.

Abingdon Health is a leading lateral flow CDMO offering its services to an international customer base across a range of industry sectors. Abingdon Health has the internal capabilities to take projects from initial concept through to routine and large-scale manufacturing, from "idea to commercial success". All projects are managed through Abingdon Health's quality management system, and its services include feasibility, optimization, technical transfer, manufacturing, regulatory and commercial support. Its UK-based automated manufacturing operations are capable of producing tens of millions of lateral flow tests per annum.

Jeremy Stackawitz, CEO of Senzo Health, commented, "This new partnership, with such an established, innovative, and trusted group as Abingdon, is a terrific opportunity for Senzo as we seek to expand the tests being developed and brought to market on our game-changing ALF platform. Collaborating with Abingdon creates a valuable synergy for customers looking to bring innovative, high-performance lateral flow products to market, and we're extremely eager to get to work on the first assays."

Chris Yates, CEO of Abingdon Health, commented, "We are really excited to be working with Senzo and supporting them in leveraging their cutting-edge lateral flow platform technology across multiple applications. We believe this strategic partnership agreement provides Senzo Health and its customers with access to Abingdon's best-in-class CDMO service to enable accelerated product development and time to market."

About Senzo:

Senzo is an in vitro diagnostics company developing innovative, accurate, and accessible testing products. Senzo was founded to utilize novel technologies, with a focus on enhanced sensitivity, to create mobile, point-of-care and self-testing products and devices with the ability to accurately, quickly, and cost-effectively conduct testing where healthcare professionals and patients need it most. Senzo is creating game-changing products and systems which bring testing to the patient, eliminating the need for the current slow, expensive central-lab testing paradigms. With insights generated at the point of care, patients can make better decisions faster, and healthcare professionals can identify life-threatening diseases at an earlier stage, improving treatment outcomes and saving lives.
